12	Extraction of EXIF Data from Image Files using ExifReader	01-10-2026

EXPERIMENT 1

Study of Computer Forensics and Different Tools Used for Forensic Investigation

Aim

To study the fundamentals of computer forensics and explore various commercial, open-source, and field tools used in digital crime investigations.

Overview of Digital Forensics

- **Concept:** Digital forensics is the field of identifying, collecting, examining, and analyzing digital evidence to determine responsibility for cyber intrusions or computer crimes.
- **Core Principle:** Perpetrators leave digital traces (log entries, registry modifications, deleted files, malware remnants) that serve as investigative evidence.

Result

The study of computer forensics concepts and various forensic investigation tools was successfully completed.

EXPERIMENT 02

Live Forensics Case Investigation using Autopsy

Aim

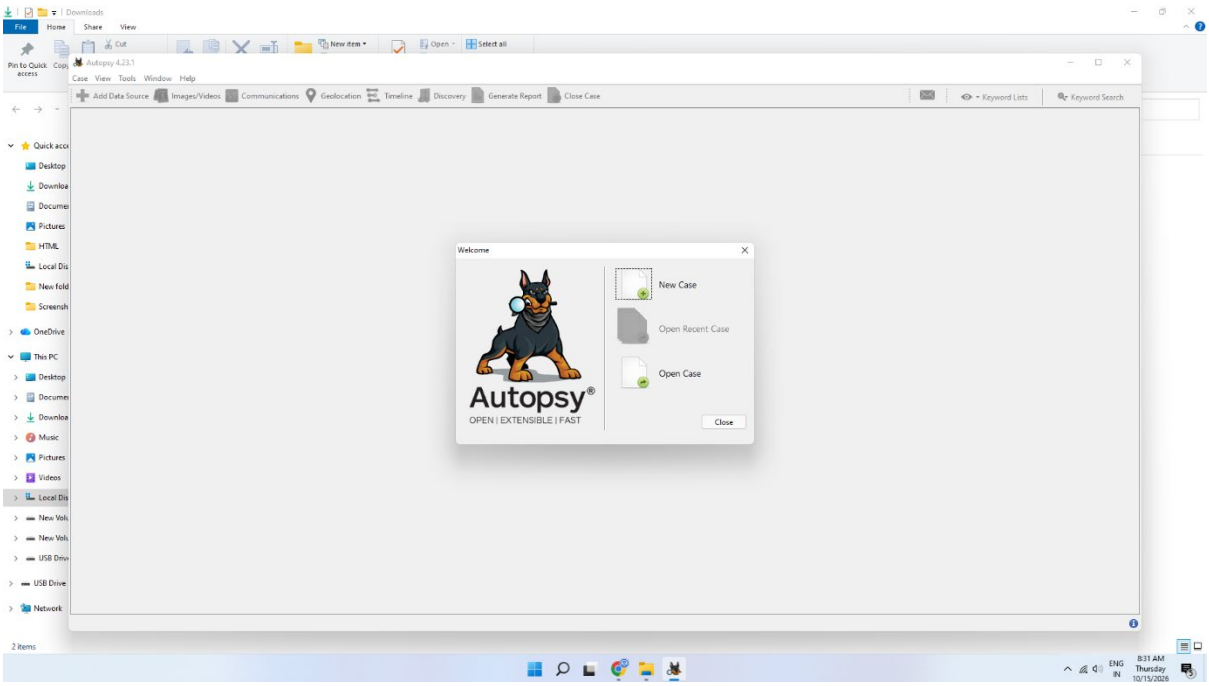

To perform a live digital forensics case investigation and analyze system evidence using the Autopsy forensic tool.

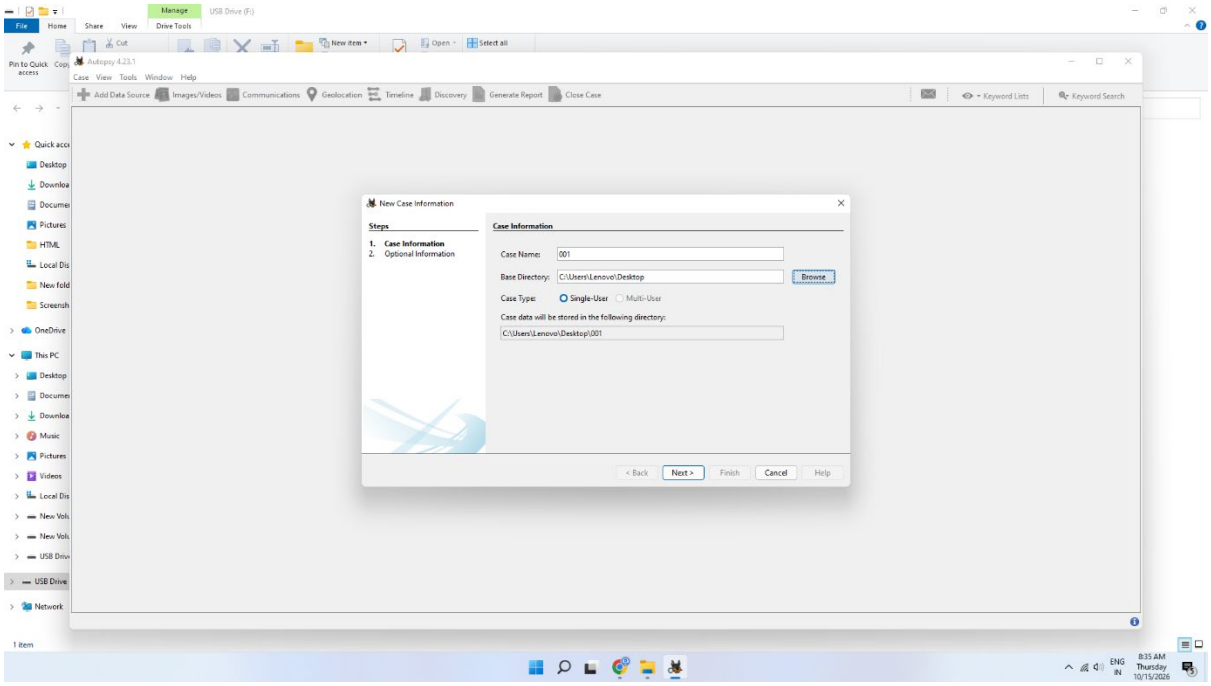

Software / Tools Required

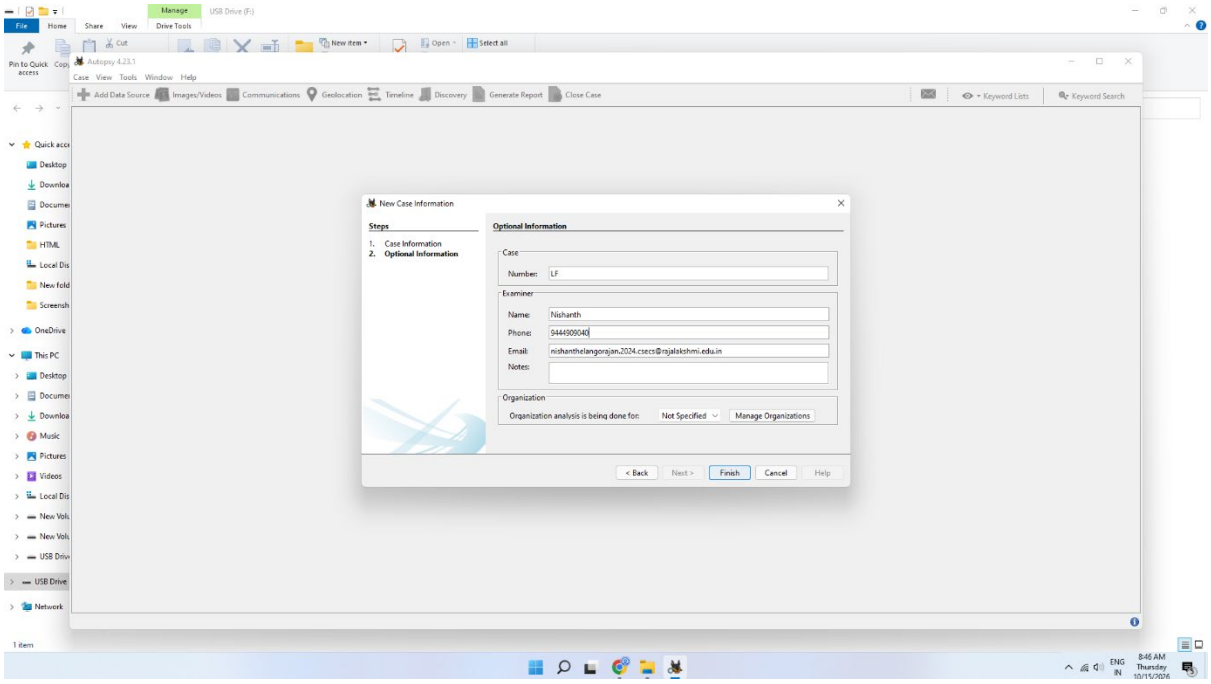

- Autopsy Digital Forensics Platform
- Target System / Evidence Image / Data Source

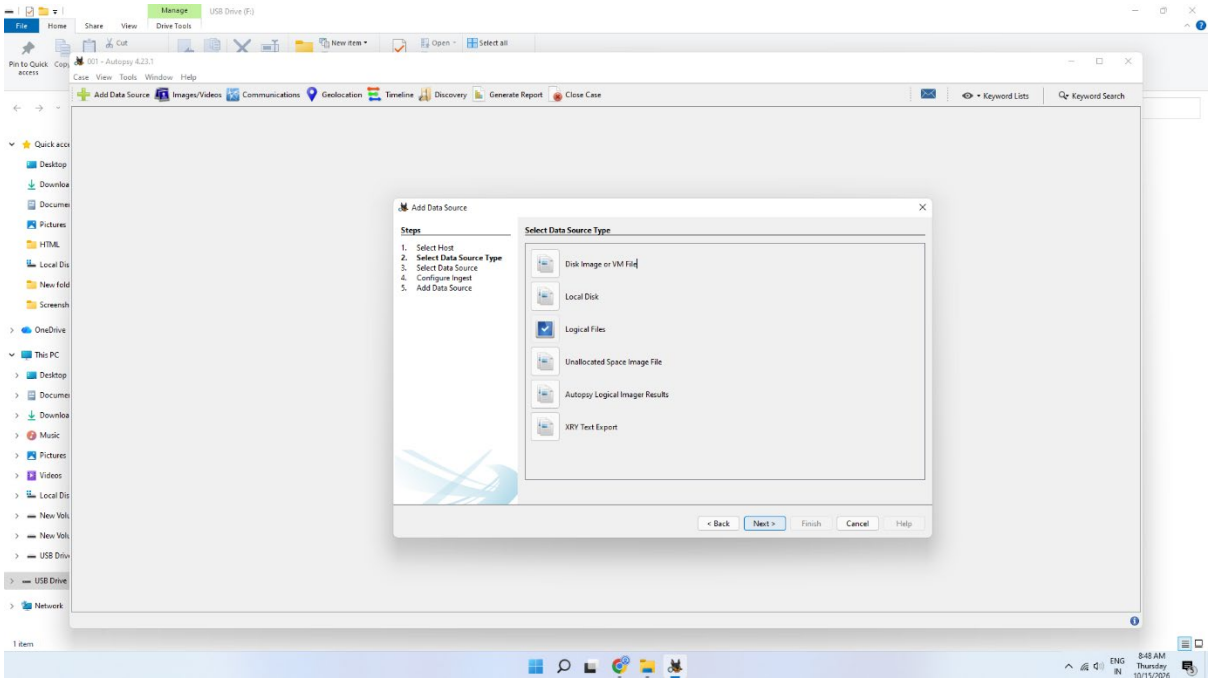

Procedure

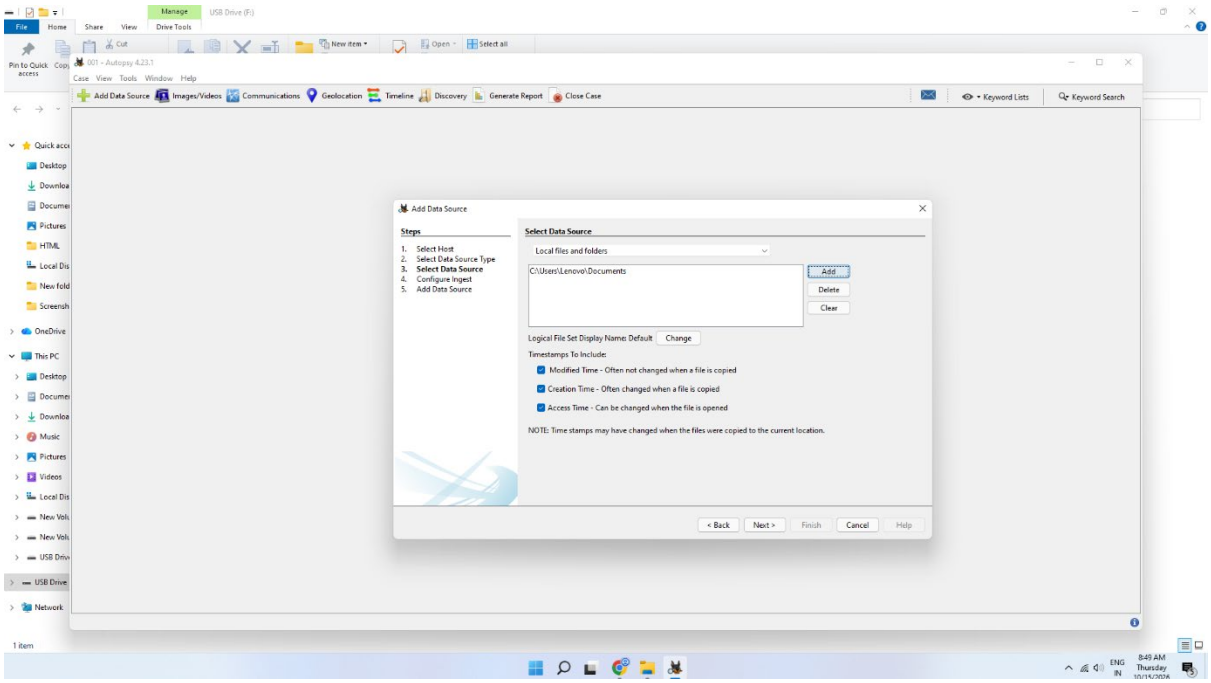

1. **Case Creation:** Launched Autopsy, selected **New Case**, and configured the *Case Name*, *Base Directory*, *Case Number*, and *Examiner Details*.
2. **Data Source Addition:** Added the target drive/disk path as the data source to the local database.
3. **Ingest Modules Configuration:** Enabled necessary ingest modules to scan and extract evidence.
4. **Evidence Analysis:** Processed and navigated through the generated investigation result.

Result

The Autopsy tool was successfully executed, and digital evidence was captured, categorized, and analyzed.

EXPERIMENT 03

Recover Deleted Files using Forensics Tools

Aim

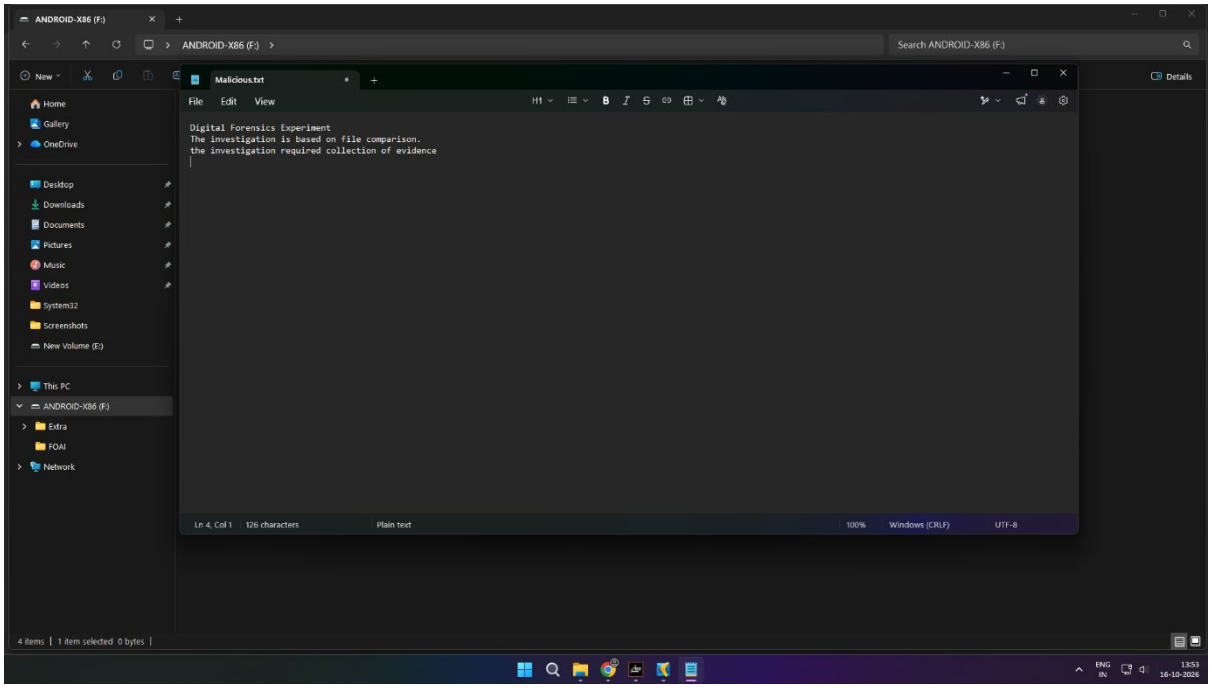

To practically demonstrate the process of recovering deleted files from a drive using digital forensic imaging and recovery tools.

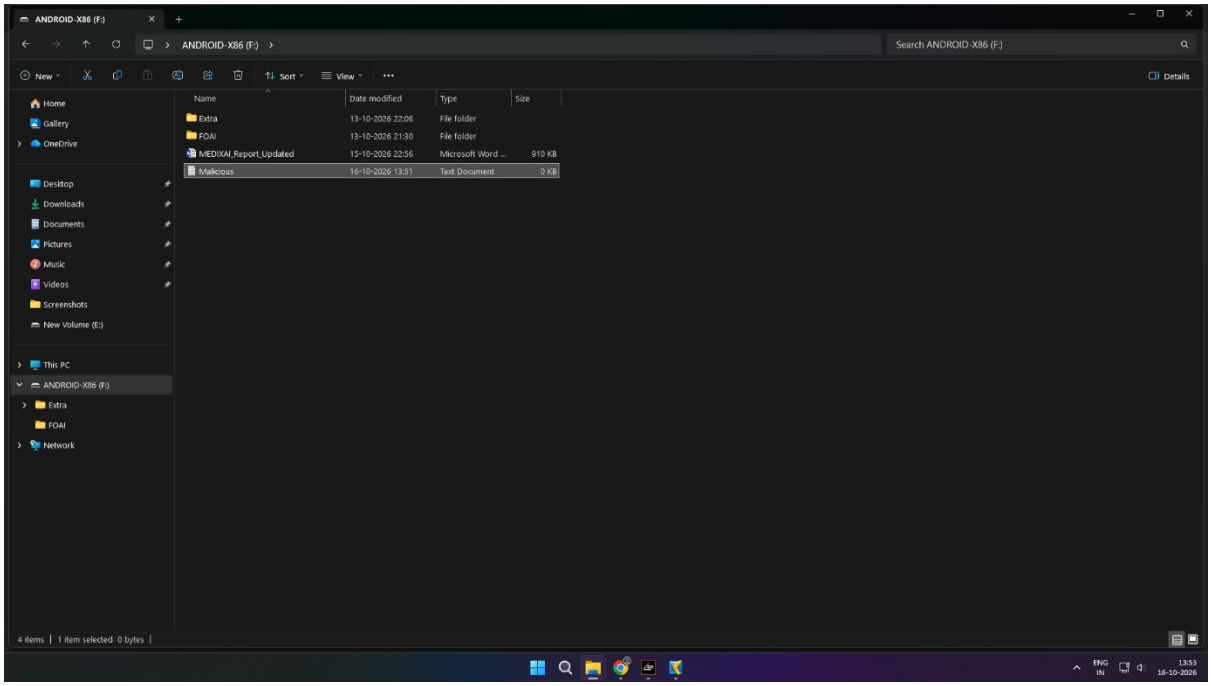

Software / Tools Required

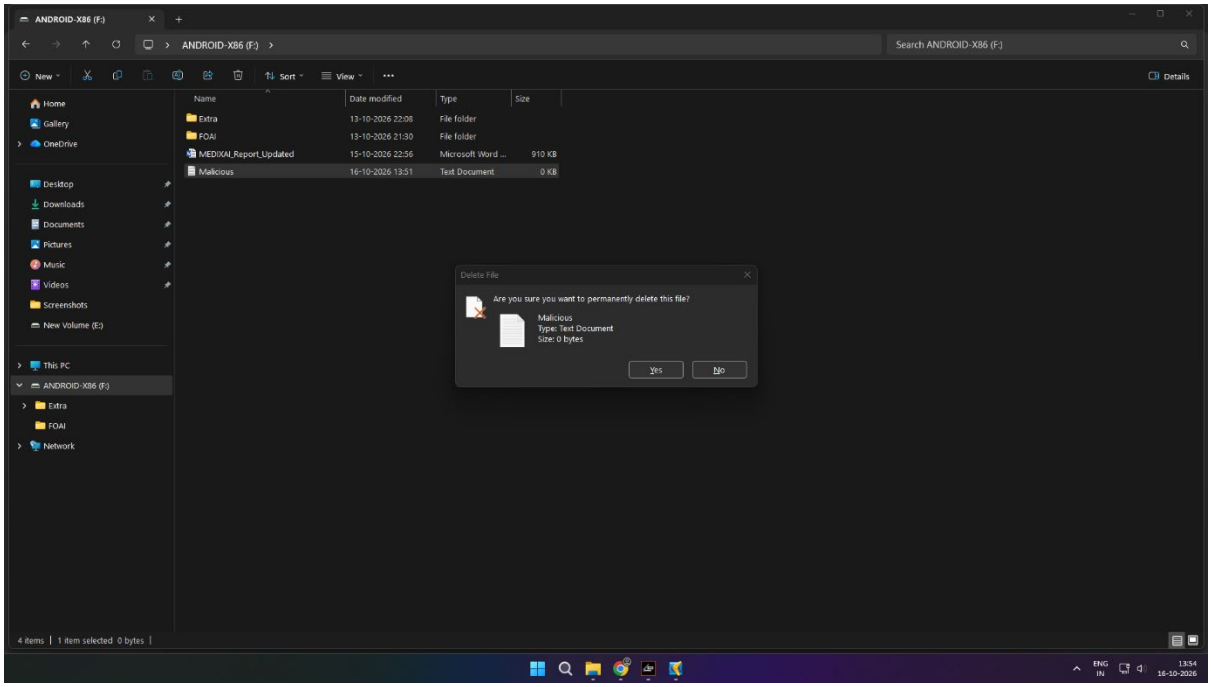

- **FTK Imager** (for bit-by-bit imaging)
- **RecoverMyFiles** (for scanning and recovery)
- Target Storage Device (e.g., USB Flash Drive)

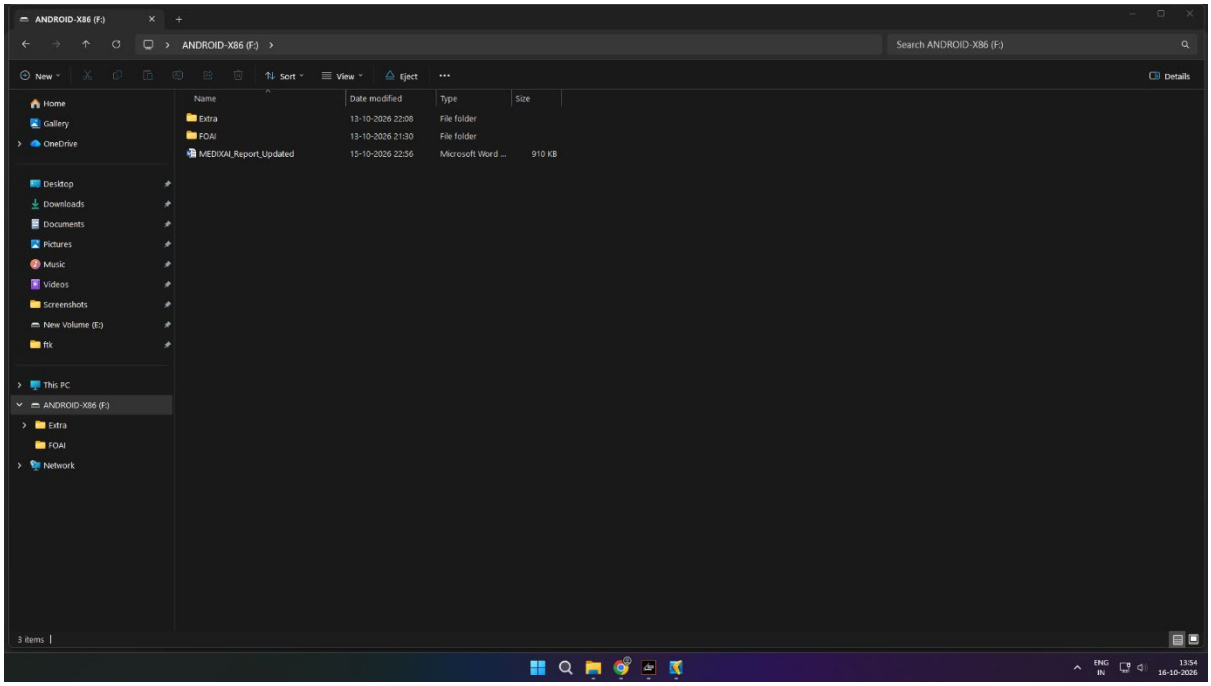

Procedure

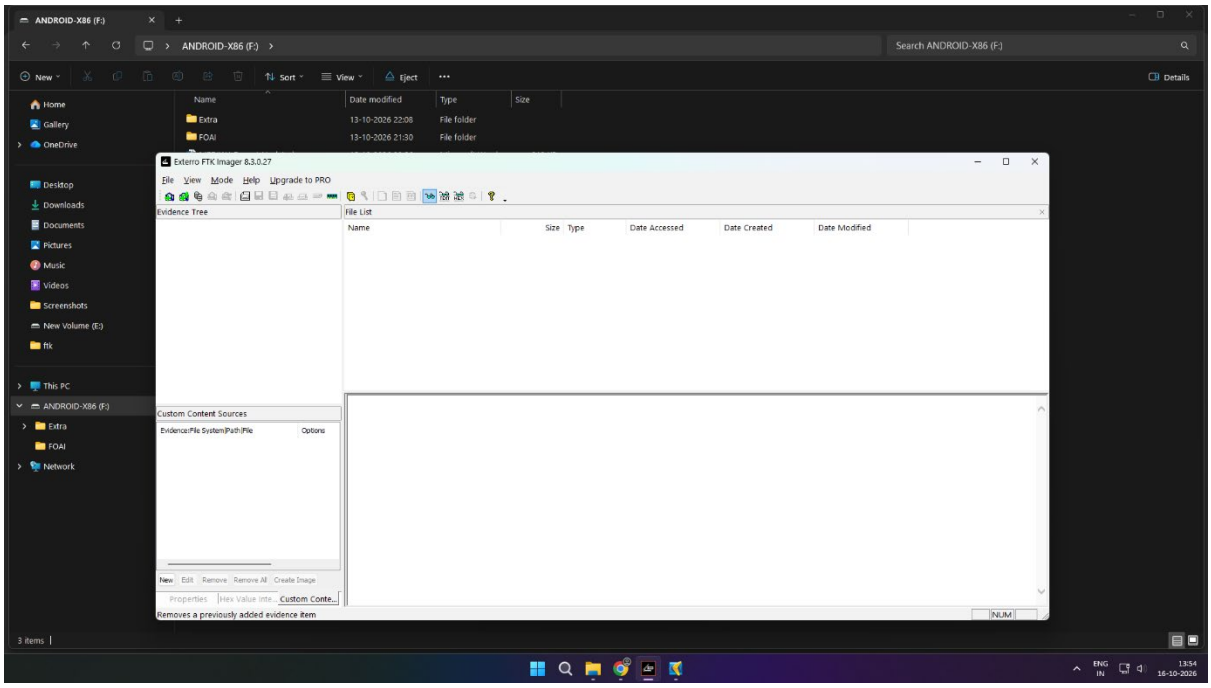

1. **Evidence Simulation:** Created a test text file (e.g., malicious.txt) on a flash drive and intentionally deleted it.
2. **Drive Imaging:** Used **FTK Imager** to select the physical drive and create a bit-by-bit forensic image.
3. **Data Recovery:** Opened **RecoverMyFiles**, selected "Recover a Drive", and loaded the created forensic image.
4. **File Extraction:** Executed the file recovery scan, filtered results by file type, and located the deleted file.

EXPERIMENT 04

Find Last Connected USB on Your System (USB Forensics)

Aim

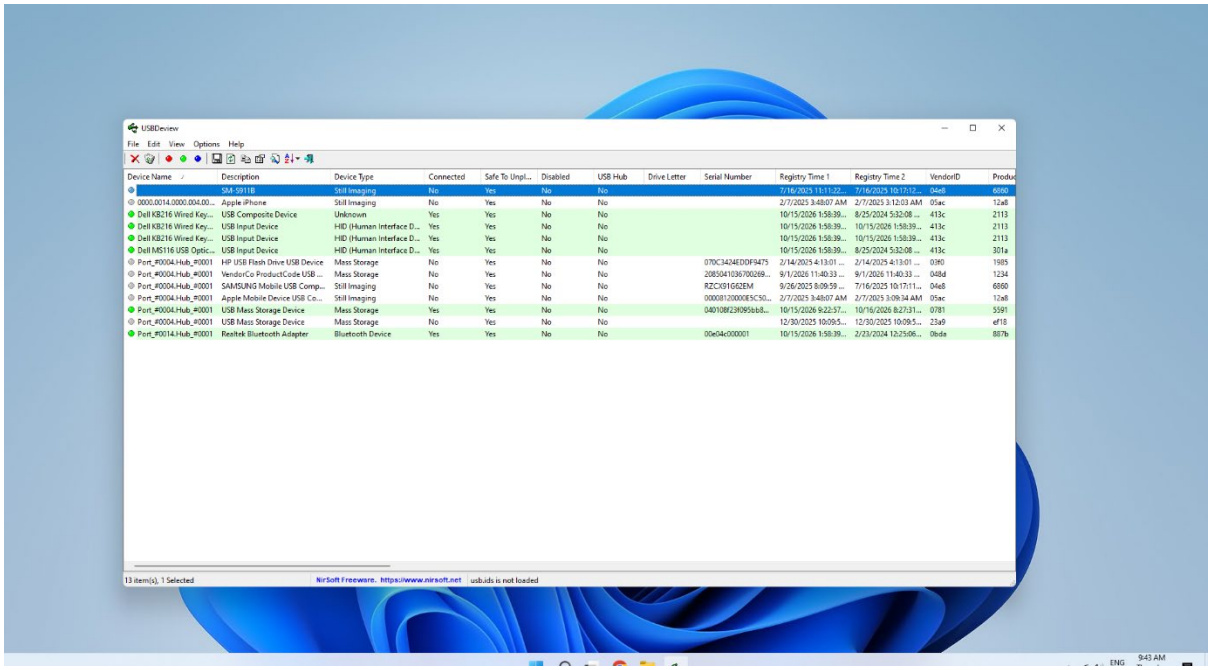

To identify and analyze history, connection logs, and details of USB devices previously or currently connected to the system.

Software / Tools Required

- USBDeview Utility
- Target Windows Host PC

Procedure

1. Executed **USBDeview** on the target Windows system with administrator privileges.
2. Retrived the generated list of all currently connected and previously attached USB devices.
3. Extracted device attributes (Device Name, Serial Number, Vendor ID, Product ID, and Last Plug/Unplug Timestamps).

USB Devices List

Created by using USBDeview

Device Name	Description	Device Type	Connected	Safe To Unplug	Disabled	USB Hub	Drive Letter	Serial Number
0000.0014.0000.001.000.000.000.000.000	MTP	Still Imaging	No	No	No	No

Port_#0001.Hub_#0001	HP v236w USB Device	Mass Storage	No	Yes	No	No		5619279D3F4B07A1

bible.usccb.org

Result

The USB forensic examination using USBDeview was successfully executed, and historical USB connection artifacts were analyzed.

EXPERIMENT 05

View Last Activity of Your PC

Aim

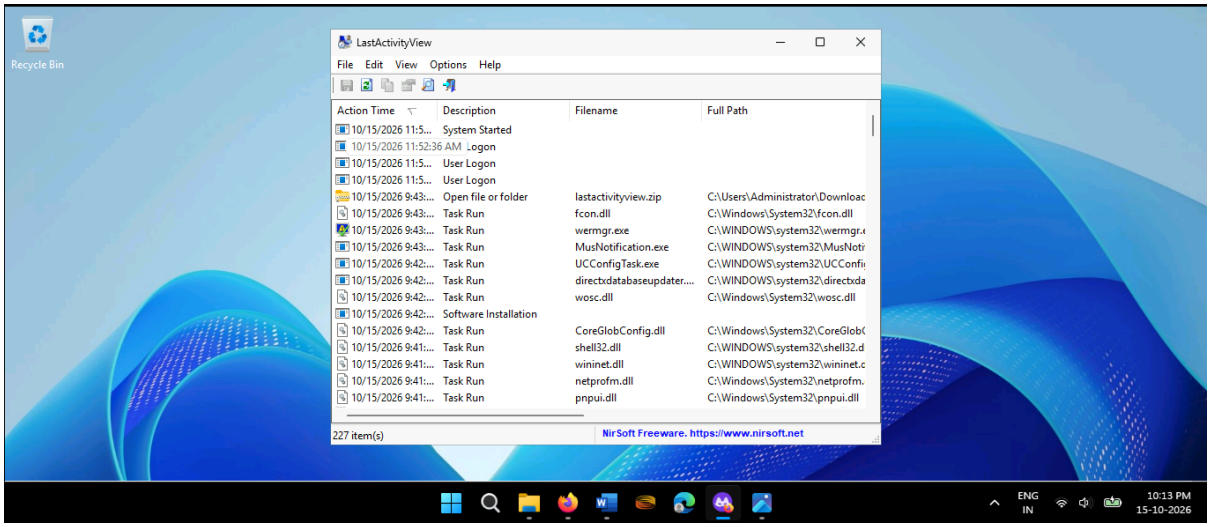

To collect and analyze system logs to view the detailed history of user actions and computer events on a running Windows OS.

Software / Tools Required

- LastActivityView Utility
- Windows Host PC

Procedure

1. Launched **LastActivityView** on the active Windows host.
2. Allowed the utility to gather event records from system sources (Registry, log files, system folders).
3. Filtered and reviewed the chronological log entries showing user activities, app executions, and system events.

Result

System activity forensic examination using LastActivityView was successfully performed and historical logs were analyzed.

EXPERIMENT 06

Extraction of Browser Artifacts

Aim

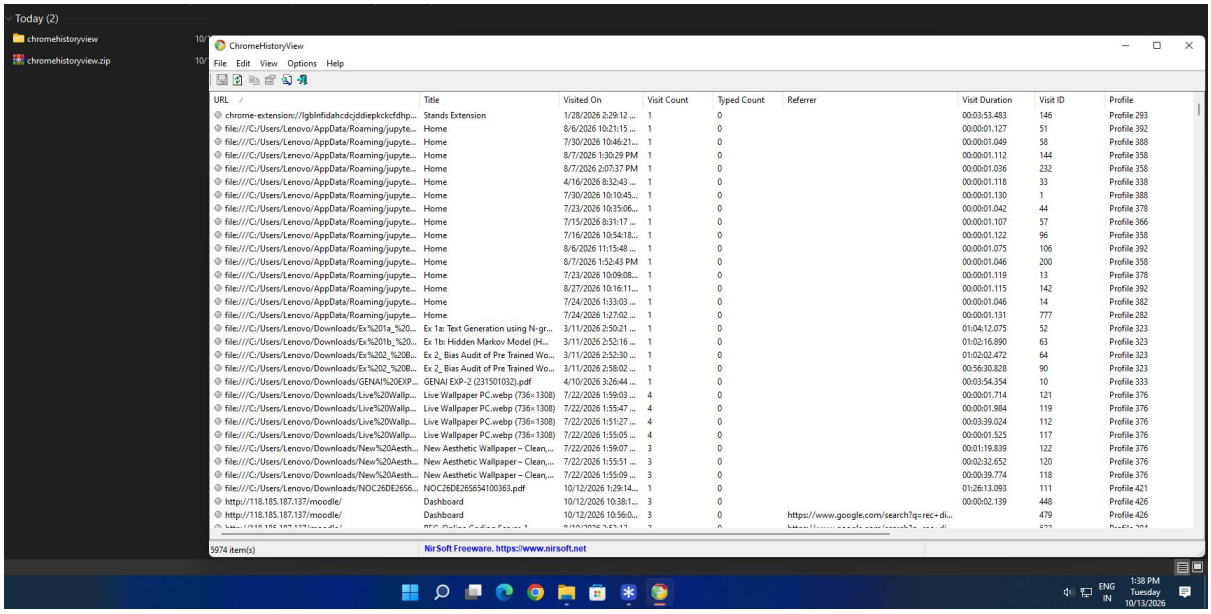

To extract and analyze web browser history, cache, and artifact data using specialized forensic utilities.

Software / Tools Required

- ChromeHistoryView & ChromeCacheView
- IEHistoryView & IECacheView
- Windows Host PC with Google Chrome and Internet Explorer installed

Procedure

1. **Chrome Extraction:** Launched **ChromeHistoryView** to view browsing history files and **ChromeCacheView** to inspect cache files.
2. **IE Extraction:** Executed **IEHistoryView** to read visited URL records and **IECacheView** to inspect cached file details.
3. **Data Analysis:** Evaluated browsing attributes (URLs, access timestamps, file paths, visit counts) and exported entries to HTML/text reports.

Result

Browser forensic tools were executed successfully, and browser artifacts were accurately extracted and analyzed.

EXPERIMENT 07

Comparison of Two Files for Forensics Investigation by Compare IT Software

Aim

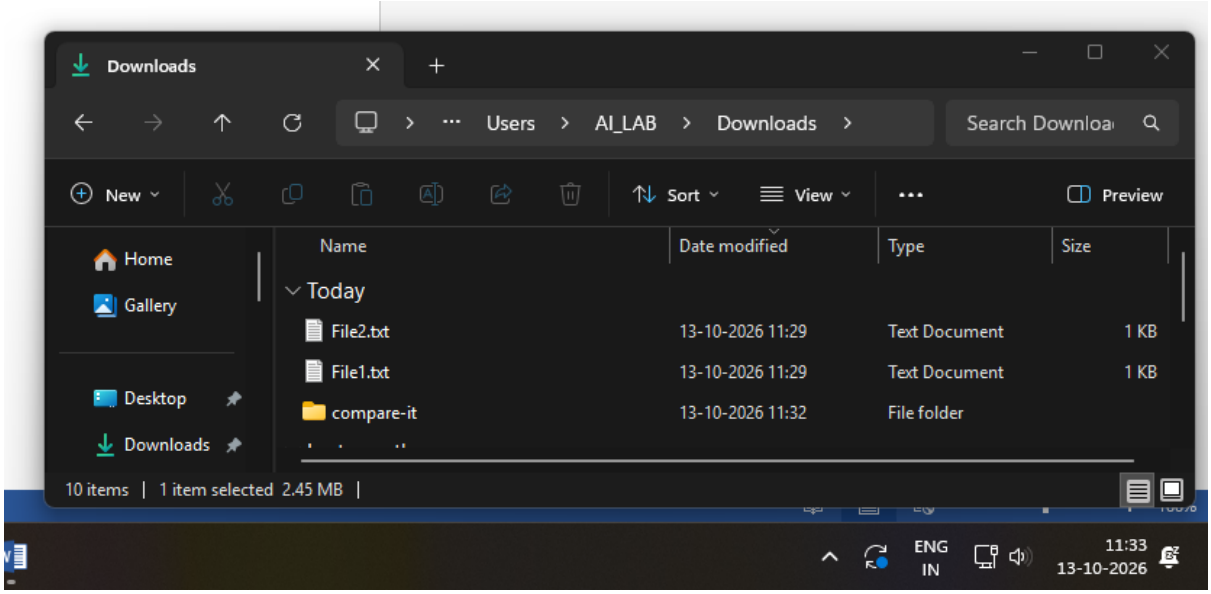

To compare two files side-by-side using **Compare IT** software to detect structural and content differences during a digital forensic investigation.

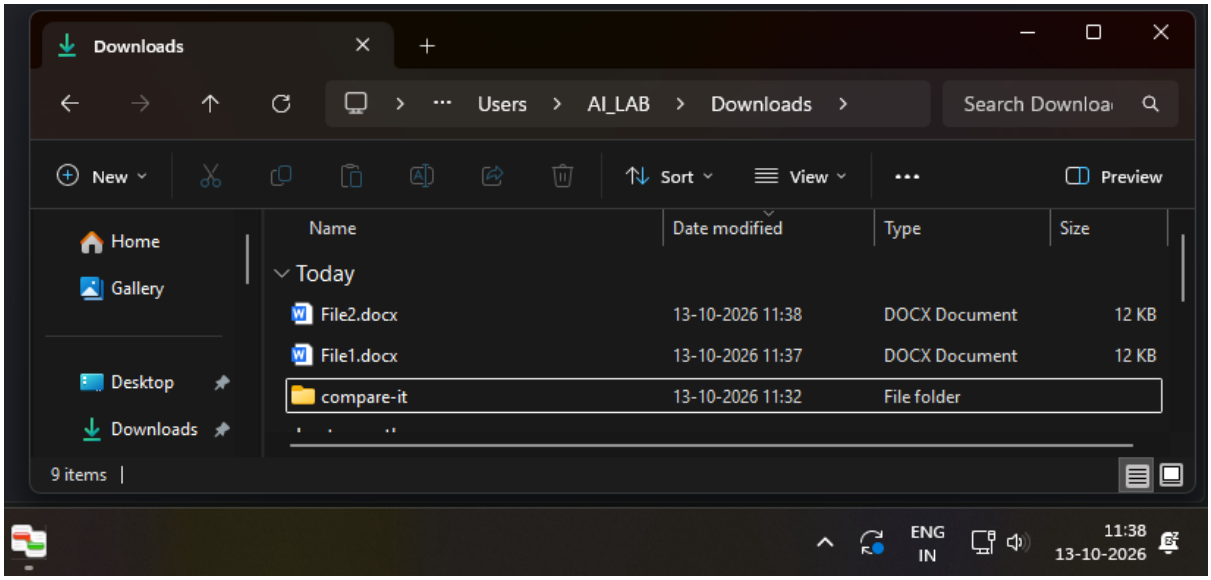

Software / Tools Required

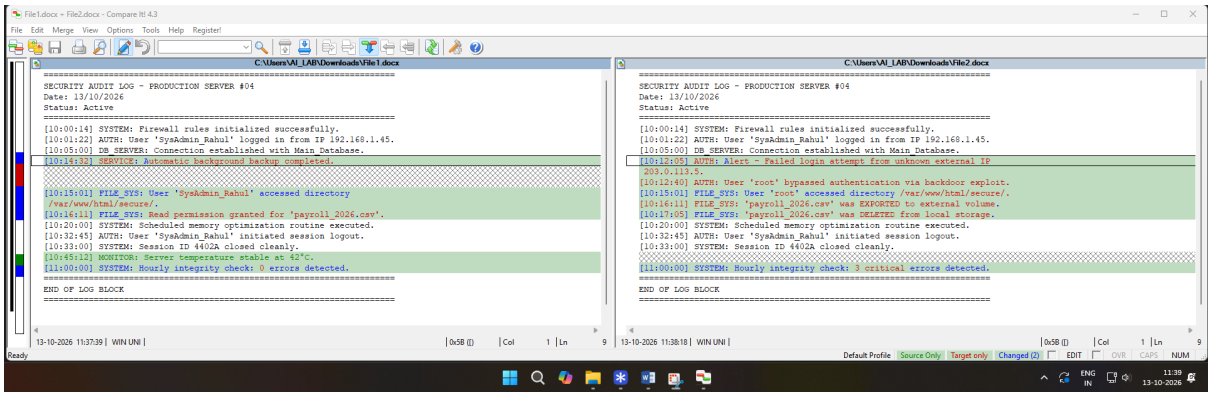

- Compare IT Software
- Target files for comparison

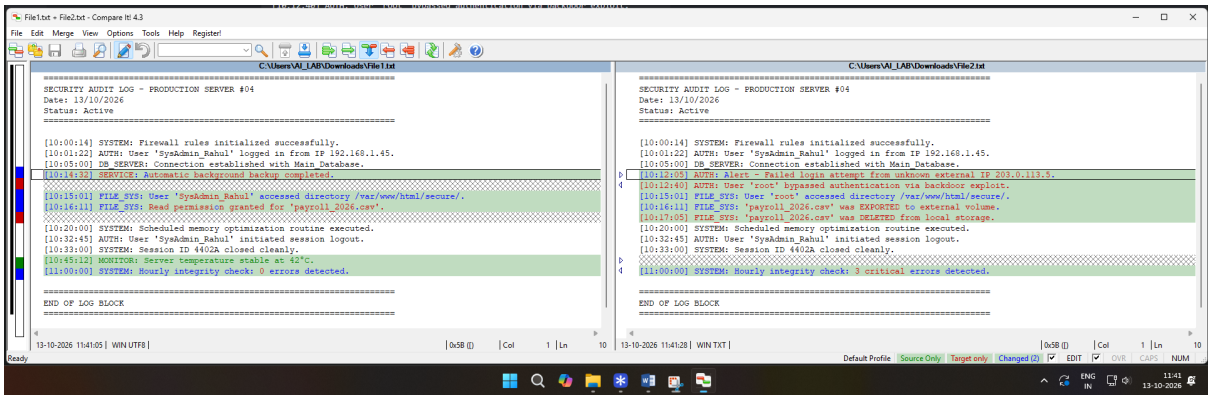

Procedure

1. Installed and opened the **Compare IT** application.
2. Loaded the first file into the left pane and the second file into the right pane.
3. Reviewed the side-by-side display with color-coded highlighted differences.
4. Saved/printed the color-coded difference report summarizing the findings.

Result

File comparison using Compare IT software was successfully conducted, and differences between target files were documented.

EXPERIMENT 08

Collecting Email Evidence in Victim PC

Aim

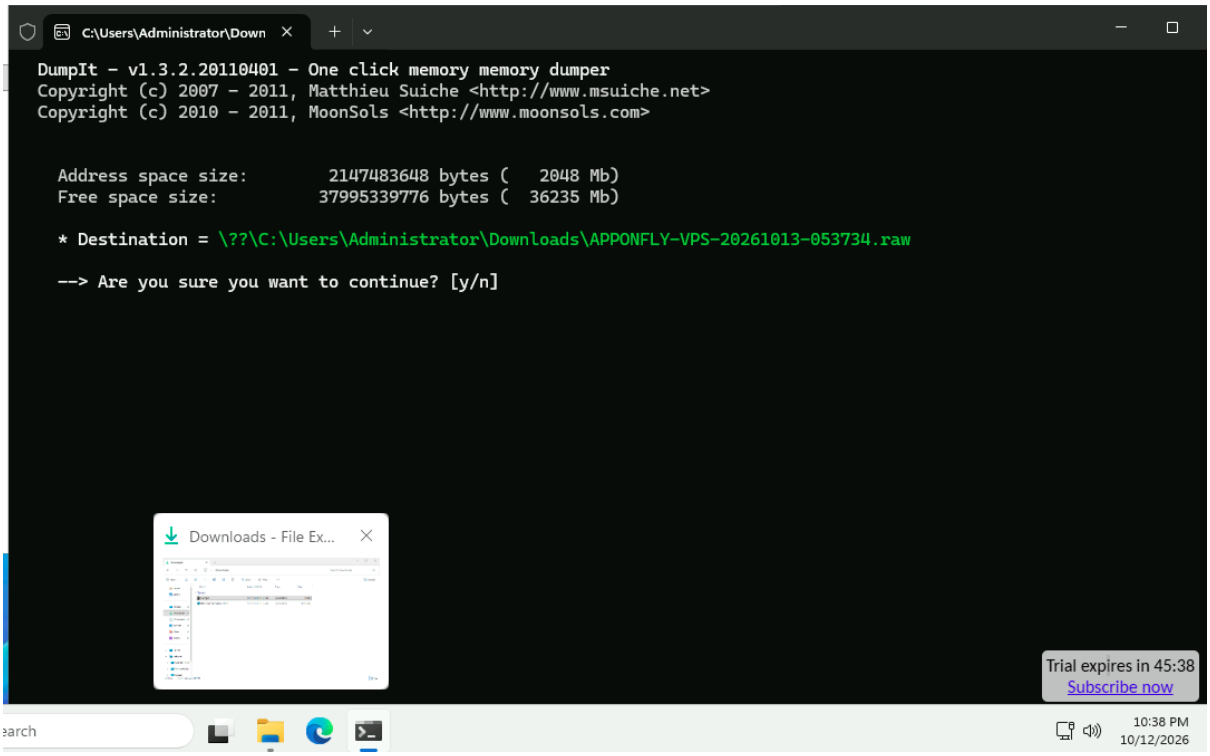

To collect and extract email evidence and volatile data from a victim PC by capturing and analyzing physical memory (RAM).

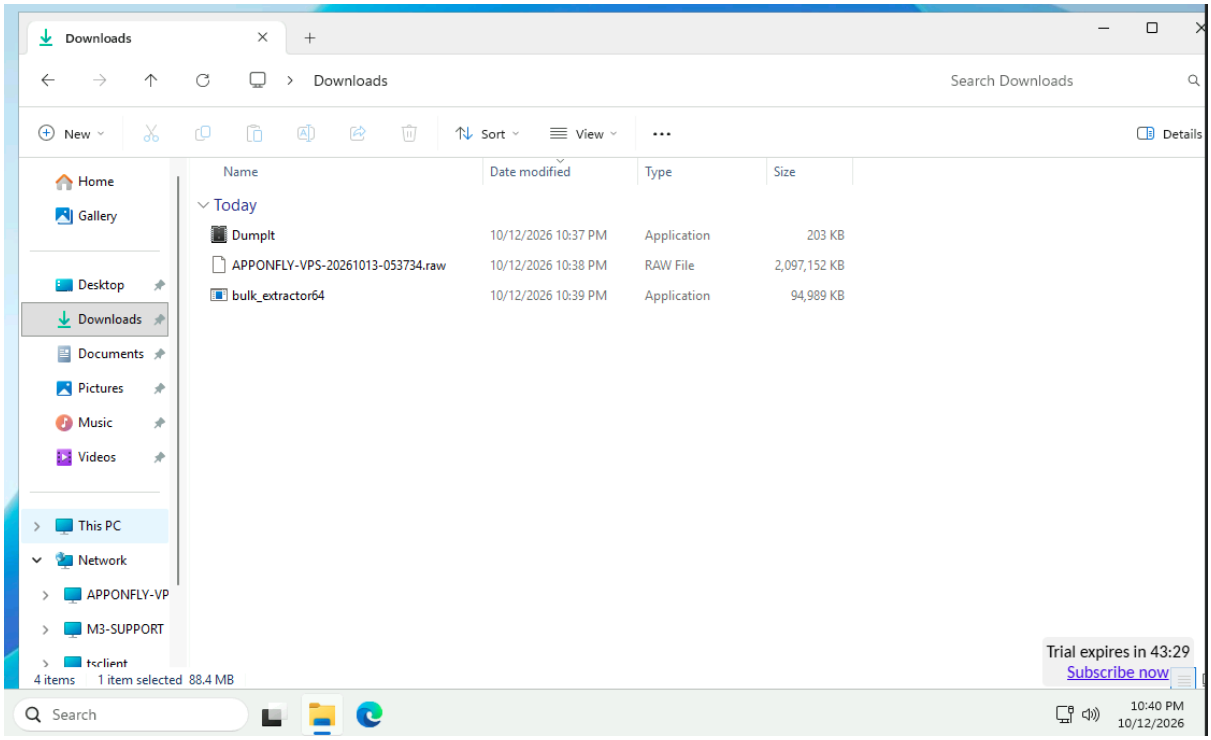

Software / Tools Required

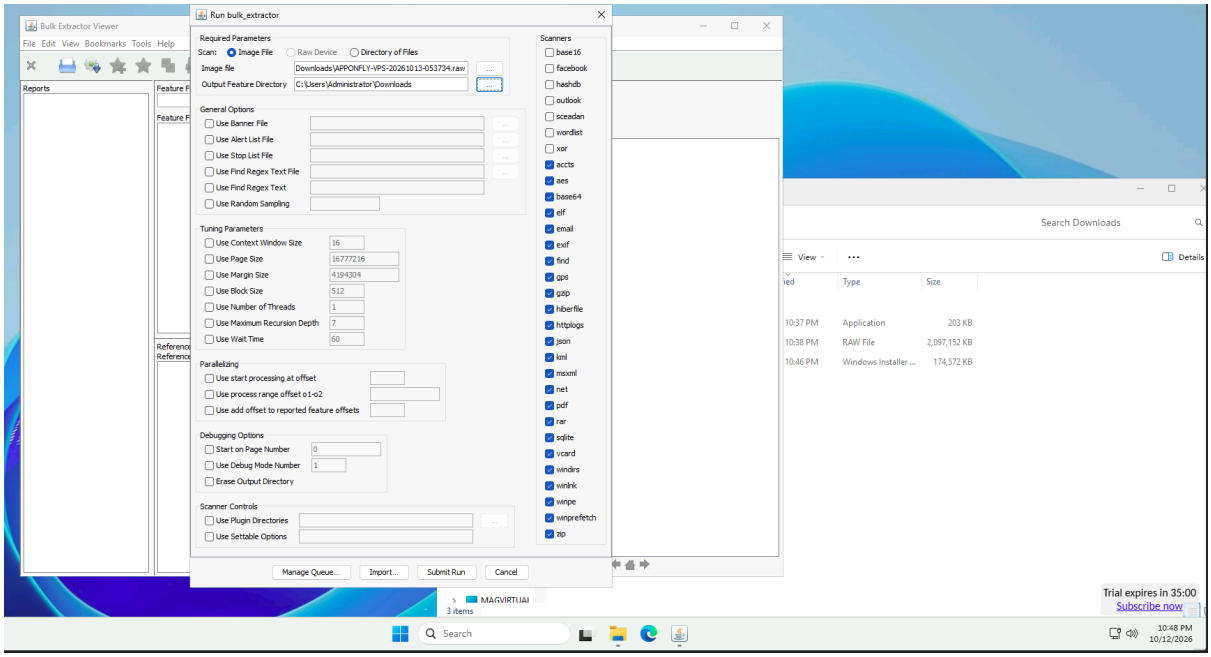

- DumpIt Utility
- Bulk Extractor (or RAM analyzer)
- Target Windows Host PC

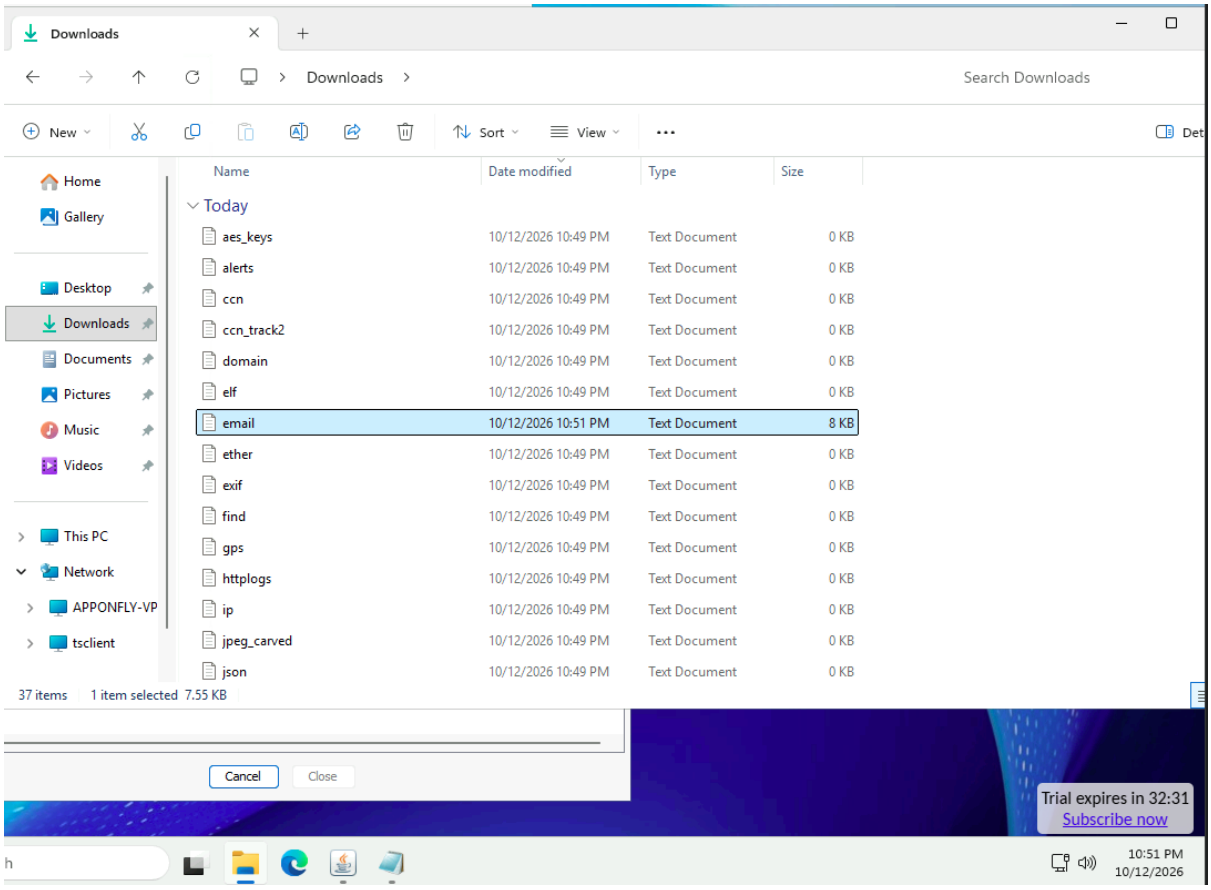

Procedure

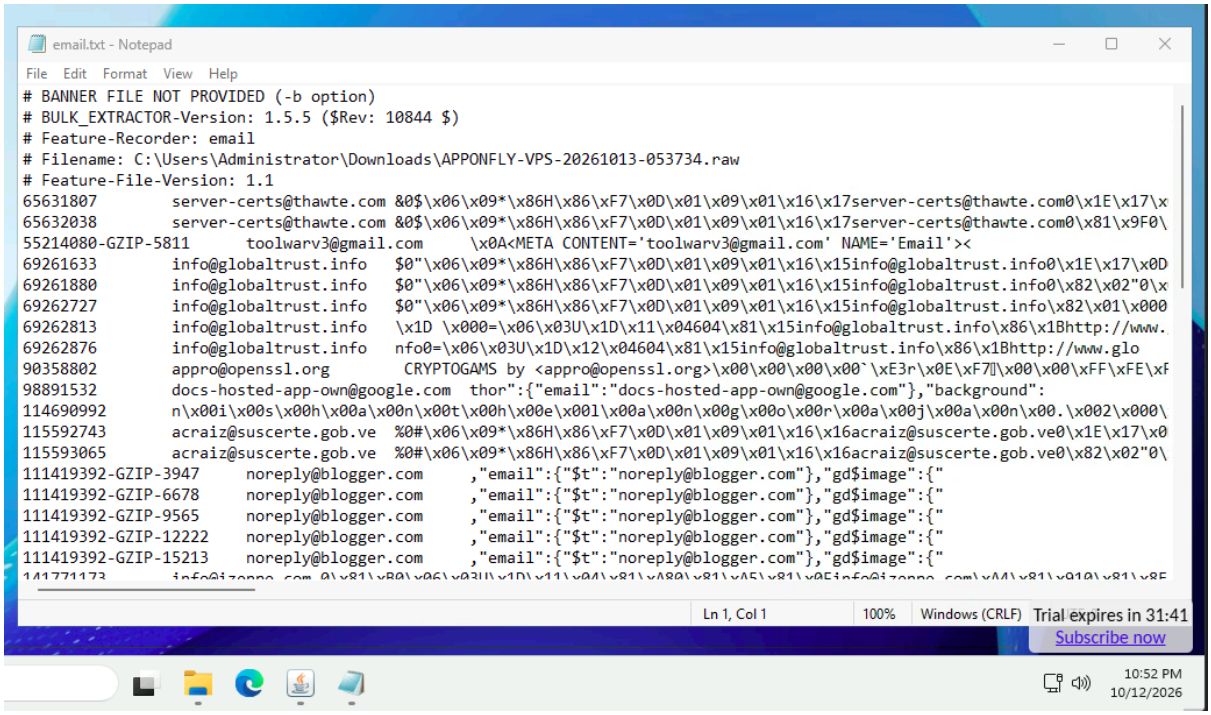

1. Executed **DumpIt.exe** directly from an external USB drive on the victim machine.
2. Confirmed the execution prompt to generate a full, raw physical memory dump (.raw file).
3. Used **Bulk Extractor** to scan the generated RAM image for email addresses, headers, and message fragments.

Result

Physical RAM from the victim PC was successfully dumped using DumpIt, and email evidence was accurately extracted.

EXPERIMENT 09

Hide and Extract Text File Behind an Image/Audio File Using Command Prompt

Aim

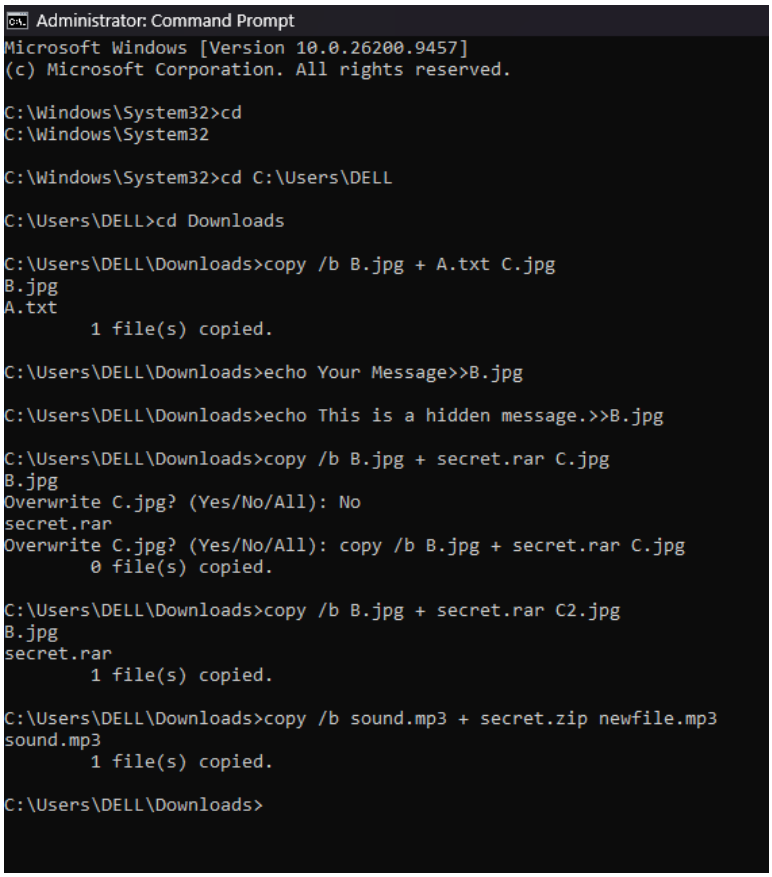

To study the steps for hiding and extracting a text file inside an image file using the Windows Command Prompt (Steganography).

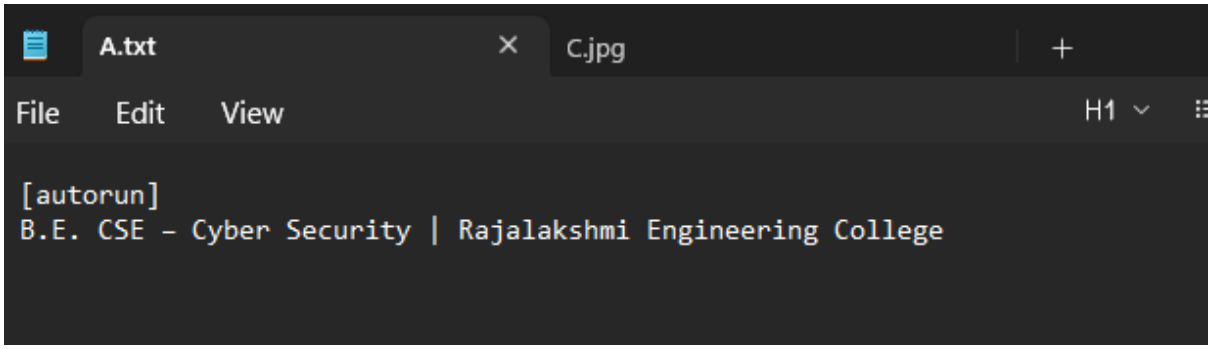

Software / Tools Required

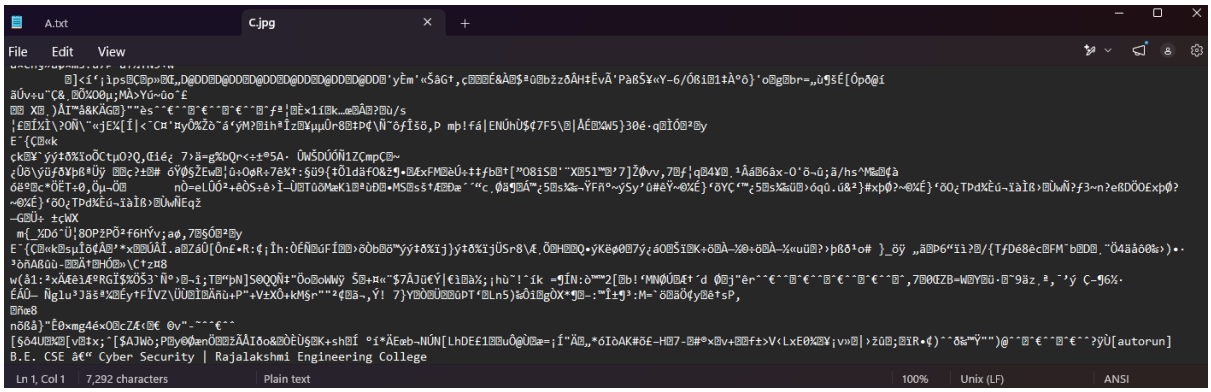

- Command Prompt (cmd.exe)
- Source Image file (B.jpg)
- Text file containing secret data (A.txt)
- WinRAR / Archiving tool

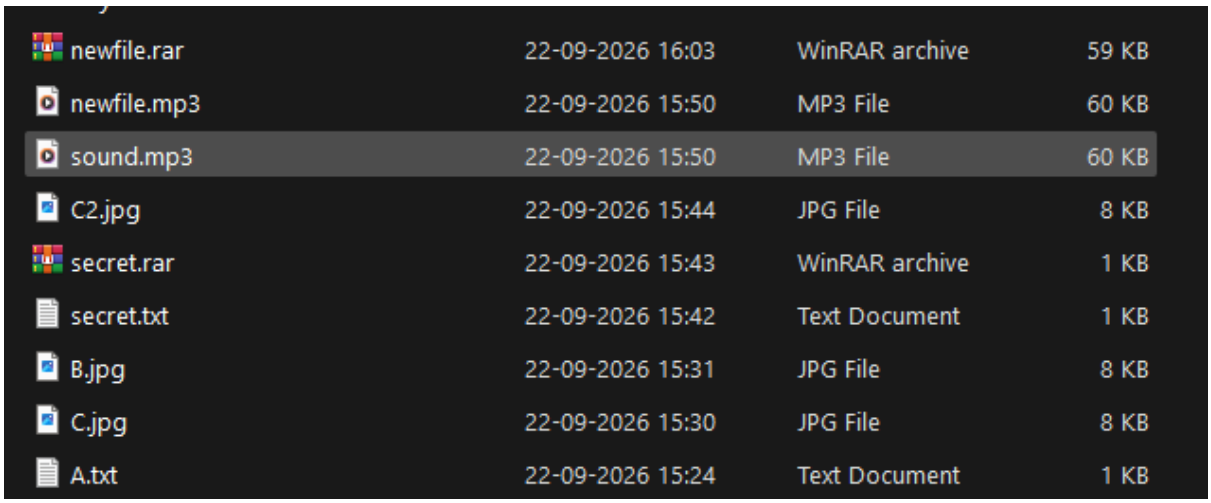

Procedure

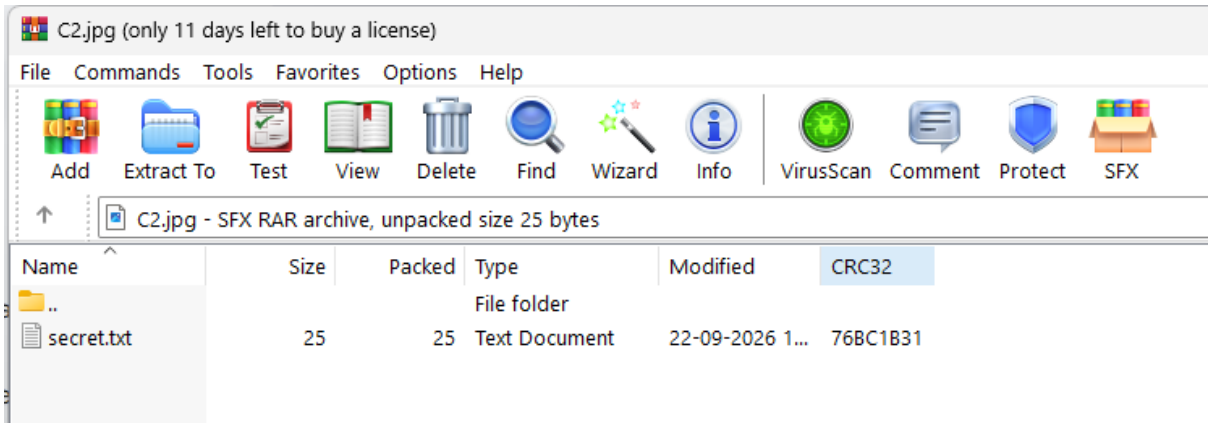

1. Placed cover image (B.jpg) and text file (A.txt) in the same folder directory.
2. Opened Command Prompt, navigated to the folder, and executed the binary copy command:copy /b B.jpg + A.txt C.jpg
3. Opened the output image (C.jpg) using WinRAR or command-line utilities to view and extract A.txt.

Result

The text file was successfully hidden behind the image file using Command Prompt, and the hidden data was retrieved.

EXPERIMENT 10

Extract Exchangeable Image File Format (EXIF) Data from Image Files using Exifreader Software

Aim

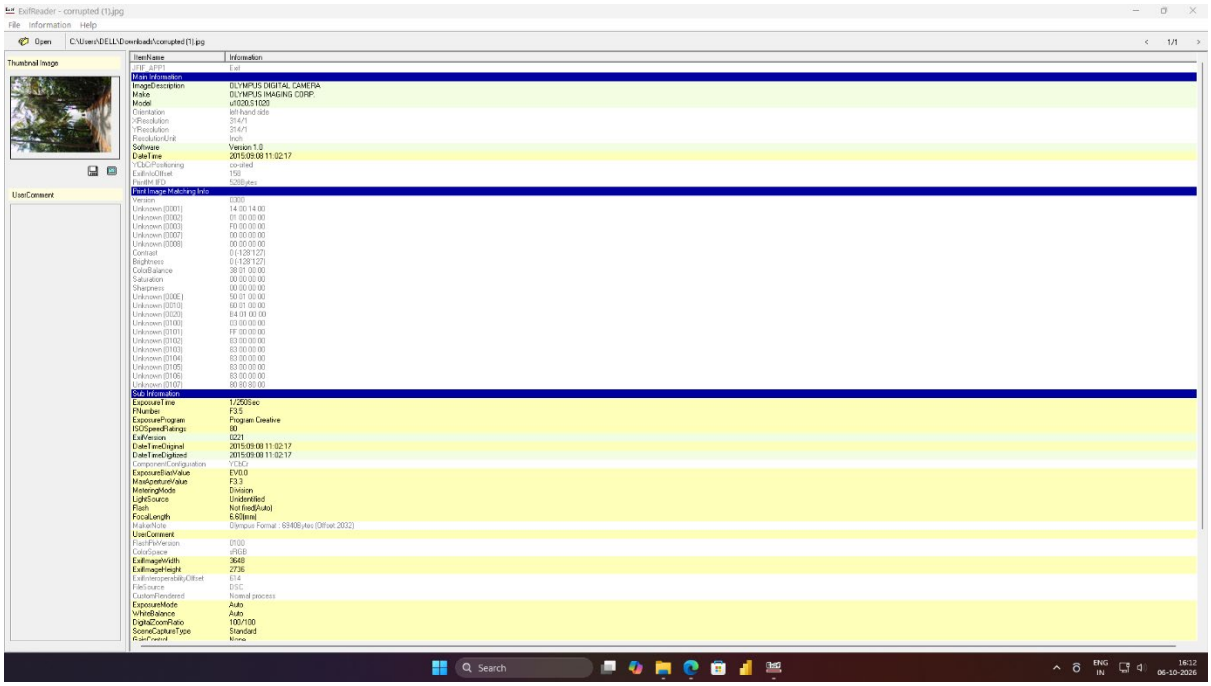

To extract and analyze metadata/EXIF data embedded within digital image files using **Exifreader** software for forensic investigation.

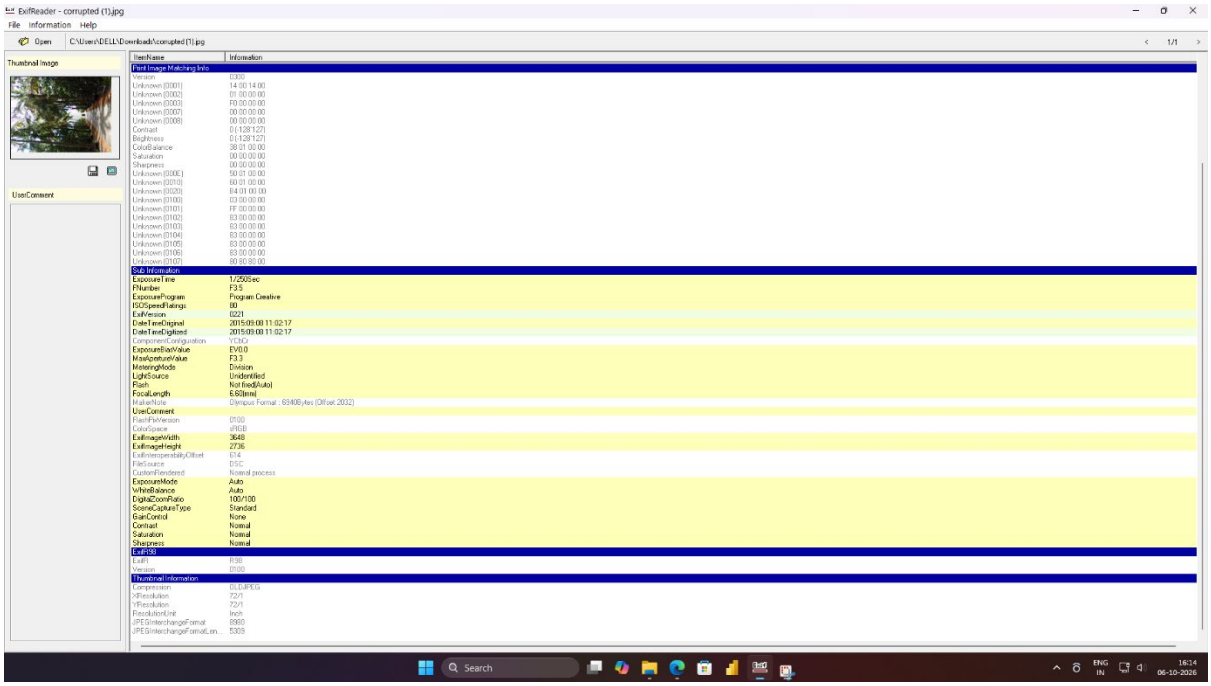

Software / Tools Required

- Exifreader Software
- Target Digital Image File (JPEG/TIFF image from a camera or smartphone)

Procedure

1. Opened the **Exifreader** application on the investigation host.
2. Imported the target digital image file into the software interface.
3. Allowed the tool to automatically parse embedded EXIF header tags.
4. Reviewed camera settings, device details, timestamps, and geolocation information.

Result

EXIF data was successfully extracted from the target image file using Exifreader, providing valuable metadata for linking evidence to a device and timeline.
